## INTRODUCTION

This report presents data on the disabled population of Manitoba with comparisons to the disabled population of Canada and data on the "More Severely Disabled" population by sub-provincial region of Manitoba.

The data was obtained from the Statistics Canada Health and Activity Limitation Survey (HALS), which surveyed households in the fall of 1986 and institutions in the spring of 1987. The populations used in this report, which exclude penal institutions, correctional facilities and incompletely enumerated Indian Reserves, are as estimated by HALS. The population of Manitoba estimated by HALS is 1,022,255, which is 27,065 less than the 1986 Census estimate of the non-institutionalized population of Manitoba.

HALS defines "disability" as a restriction, or lack of ability caused by impairment, to perform an activity within the normal range . If the limitation is temporary or if the use of a technical aid completely eliminates it, the individual is not considered disabled.

The sampling frame for HALS was derived from the question on activity limitations included on the 2B (20% sample) 1986 Census form. This was followed up by HALS, which sampled from those who had replied positively to the Census question on activity limitations (the "Yes Sample"), and from those who had replied negatively to the Census question but had identified themselves as disabled through questions from the Canadian Health and Disability Survey (CHDS) (the "No Sample").

It was discovered that the "No Sample" included many persons with mild disabilities, as well as some of the elderly.

**Section I** of this report uses data from both the "Yes Sample" and the "No Sample" and estimates 160,865 disabled persons in Manitoba, 150,855 of whom live in households.

**Section II** uses only household data from the "Yes Sample", and estimates 83,995 "More Severely Disabled" persons living in Manitoba households.

Included in Section I of this report is data on the disabled population by:
- sex and age group
- place of residence (household or institution)
- number of disability types
- nature of disabilities
- labour force status
- type of school and classes attended

Included in Section II of this report is sub-provincial data on the "More Severely Disabled" population of Manitoba, living in households, by a number of variables included in the 1986 Census of Population, and by a number of disability related variables from HALS.

Inquiries regarding this report, or to obtain additional information, should be directed to David Greenwood of the Manitoba Bureau of Statistics at (204) 945-2989.

## DEFINITIONS

**Disability** Any restriction or lack of ability, resulting from an impairment, to perform an activity within the range considered normal for a human being. The limitation has to be of at least six months duration in order to qualify as a disability.

Individuals are not considered disabled if the use of a technical aid completely eliminates their limitation.

## TYPES OF DISABILITY

**Mobility** Individual is limited in ability to walk, move from room to room, carry an object for 10 metres, or stand for long periods.

**Agility** Individual is limited in ability to bend, get dressed or undressed, get in and out of bed, cut toenails, use fingers to grasp or handle objects, or reach or cut own food.

**Seeing** Individual is limited in ability to read ordinary newsprint or to see someone from 4 metres, even when wearing glasses.

**Hearing** Individual is limited in ability to hear what is being said in conversation with one or more persons, even when wearing a hearing aid.

**Speaking** Individual is limited in ability to speak and be understood.

**Other** Individual is limited as a result of a learning disability or emotional or psychiatric disability, or developmental delay.

**Unknown** Individual is limited but nature of limitation is unspecified.

## DISABILITY RATES

The Health and Activity Limitation Survey estimated that 3,316,870 Canadians and 160,865 Manitobans had one or more types of disability in 1986. This represents 13.2% of the Canadian population and 15.7% of the Manitoba population.

For males, the disability rate of Manitoba was 1.9 percentage points higher than the disability rate of Canada, and for females the Manitoba rate was 3.0 percentage points higher. The disability rate of Manitobans was also greater than the Canada rate in all four age groups (0-14, 15-34, 35-64, and 65+).

For both Manitoba and Canada, the disability rate for females was higher than the rate for males. In Manitoba the male disability rate surpassed the female rate only in the 0-14 age group; males 6.9% and females 6.6%. However, for Canada, females had a higher disability rate only in the 65+ group. The female disability rate for this age group was 46.8% while the male rate was 43.7%.

For both Manitoba and Canada, disability rates for both sexes increased with age. The only exception to this trend was for males in Manitoba; the 0-14 age group posted a 6.9% disability rate, which fell to 6.1% for the 15-34 age group.

Of the 2,730,585 male children (aged 0-14) in Canada in 1986, 156,190 (5.7%) reported having at least one type of disability, as did 121,255 (4.7%) of the 2,594,605 female children in Canada. The disability rates for children in Manitoba were higher; 6.9% for males (7,815 of 113,635) and 6.6% for females (7,095 of 107,905).

In both Manitoba and Canada, the disability rates for males aged 0-4 were lower than those for females. However, disability rates for males in the 5-9 and 10-14 age groups were higher than for females. In Manitoba, of 39,370 males aged 0-4, 1,455 (3.7%) were disabled compared to 1,630 (4.6%) of 35,175 females. The disability rates of the 5-9 age group were 7.6% for males and 6.8% for females, while the disability rates of the 10-14 age group were 9.5% for males and 8.2% for females.

Even among children, disability rates increased with age. For both sexes in Manitoba, the disability rate for those aged 0-4 was 4.1%, for those aged 5-9 it was 7.2% and for those aged 10-14 it was 8.8%. In Canada, the disability rates for children were 3.4% for the 0-4 age group, 5.8% for the 5-9 age group and 6.4% for the 10-14 age group.

Of the 1,130,440 Canadian males aged 65+, 494,340 (43.7%) claimed at least one type of disability in 1986, as did 727,655 (46.8%) of the 1,554,220 Canadian females in this age group. The disability rates of Manitoba seniors were higher; 49.9% for males (27,670 of 55,490) and 51.1% for females (38,485 of 75,250).

## THE DISABLED BY PLACE OF RESIDENCE

Tables 1 and 2, in Appendix I, provide data on disability rates and the percentage of disabled persons living in households, by sex and age group, for Manitoba and Canada. It can be assumed that the number and percentage of disabled persons not living in households live in institutional settings.

Of the 3,316,870 disabled Canadians in 1986, 3,069,595 (92.5%) lived in private households and 247,275 (7.5%) were institutional residents. Similarly, of the 160,865 disabled Manitobans, 150,855 (93.8%) lived in private households and 10,010 (6.2%) lived in institutions.

A greater percentage of disabled males than females lived in households. For Manitoba, 95.4% of males compared to 92.4% of females, and for Canada, 94.4% of males compared to 90.8% of females lived in private households. In the 65+ age group, 92.0% (Manitoba) and 88.5% (Canada) of disabled males lived in households, compared to 85.4% (Manitoba) and 81.0% (Canada) of disabled females. However, in the younger age groups, the percentage of disabled females living in households equaled or exceeded the male percentage, for both Manitoba and Canada.

In both Manitoba and Canada, approximately 99% of disabled children (aged 0-14) lived in households rather than institutions. In Manitoba 99.2% of disabled female children lived in households, compared to 98.5% for males.

The percentage of disabled children of both sexes living in households tended to be higher for Canada than for Manitoba. Among disabled children aged 0-4, 99.8% (Canada) and 99.2% (Manitoba) lived in private households, as did 99.3% (Canada) and 99.0% (Manitoba) of disabled children aged 5-9 and 98.6% (Canada and Manitoba) of disabled children aged 10-14.

The disparity between the percentage of disabled males and disabled females living in households tends to increase with age, as illustrated by the chart on the opposite page.

Disabled people in the 65+ age group have a greater likelihood of being institutional residents. For Manitoba, about one percent of the disabled 0-14 age group was institutionalized, as were 3.4% of the 15-34 age group, 2.2% of the 35-64 age group and fully 11.8% of the 65+ age group.

For disabled seniors in both Manitoba and Canada, the percentage of males living in households exceeded the percentage of females in households. For Manitoba, 92.0% of disabled males and 85.4% of disabled females aged 65+ lived in households. For Canada, 88.5% of males compared to 81.0% of females lived in households.

This trend holds true for most of the senior sub-age groups. However, in Manitoba, 79.3% of disabled males aged 80-84 lived in households compared to 80.3% of disabled females in this age group, and in Canada, 95.5% of disabled males aged 65-69 lived in households compared to 95.6% of females.

Considering both sexes, the percentage of institutionalized disabled seniors in Manitoba was lower than the percentage of institutionalized disabled seniors in Canada. This holds true for all of the senior sub-age groups presented. It is also true, that for each successive age group a larger percentage of the disabled population becomes institutionalized.

In Manitoba, 3.2% of disabled persons aged 65-69 were in institutions compared to 29.4% of those aged 85+. In Canada, 4.5% of disabled persons aged 65-69 were in institutions compared to 42.7% of those aged 85+. Females accounted for 59.8% (Manitoba) and 49.4% (Canada) of the institutionalized 65-69 age group, and for 81.4% (Manitoba) and 78.2% (Canada) of the institutionalized 85+ age group.

The chart below illustrates the connection between age and disability. Children (aged 0-14) comprise about 22% of the Manitoba population, but only about 9% of Manitoba's disabled population. Conversely, seniors (aged 65+) comprise about 13% of the Manitoba population, but account for over 41% of Manitoba's disabled population.

## DISABLED ADULTS - LABOUR FORCE STATUS AND WORK LIMITATIONS

Of the 79,800 disabled Manitobans aged 15-64, 49.3% (39,375) were employed in 1985 or 1986, 5.2% (4,150) were unemployed and 41.1% (32,835) were not in the labour force. A further 4.3% (3,440) failed to state their labour force status.

Of the 1,817,430 disabled Canadians aged 15-64, 39.2% (711,560) were employed in 1985 or 1986, 7.1% (128,405) were unemployed, 49.3% (895,985) were not in the labour force and 4.5% (81,480) failed to state their labour force status.

Within the employed disabled group, 62.1% of Manitobans and 53.2% of Canadians reported being limited to some degree at work, by their disabilities. A further 37.2% and 46.4%, for Manitoba and Canada respectively, claimed not to be limited at work. A very small percentage of the employed disabled failed to state if disabilities put limitations on them at work; 0.7% for Manitoba and 0.3% for Canada.

From among the unemployed disabled, 73.7% of the Manitoba group and 71.5% of the Canada group claimed to be limited at work, and 25.2% of the Manitoba group and 25.5% of the Canada group claimed to have no limitations at work, as a result of disabilities. In Canada, 2.5% of disabled unemployed adults claimed to have never worked.

Of the 32,835 disabled Manitobans, aged 15-64 and not in the labour force, 62.9% reported limitations at work, 14.0% reported no limitations, 21.9% had never worked and 1.2% failed to state work limitations, if any.

Of the 895,985 disabled Canadians, aged 15-64 and not in the labour force, 70.9% reported limitations at work, 7.2% reported no limitations, 18.7% had never worked and 3.2% failed to state work limitations, if any.

From among the labour force status Not Stated group, 98.5% of Manitobans and 93.7% of Canadians also failed to state their work limitations. The remainder of persons in this group claimed to be limited to some degree at work, as a result of disabilities.

## DISABLED ADULTS - NUMBER OF DISABILITIES

In Manitoba over Canada, a greater percentage of disabled adults reported having more than One Type of Disability. Of the 145,955 disabled adults in Manitoba, 36.6% reported One Type of Disability and 63.4% reported Multiple Disabilities. In Canada, 38.6% of the 3,039,425 disabled adults reported One Type of Disability and 61.4% reported Multiple Disabilities.

In Manitoba over Canada, a greater percentage of disabled adults reported having Two, Four and Five Types of Disabilities in 1986. Two Types were reported by 32.4% of Manitoba's and 31.4% of Canada's disabled adults, Four Types were reported by 9.6% of Manitoba's and 8.6% of Canada's disabled adults and Five types were reported by 4.1% of Manitoba's and 3.9% of Canada's disabled adults.

In both Manitoba and Canada, 1.5% of the disabled adult population claimed all Six Types of disability: Mobility, Agility, Seeing, Hearing, Speaking and Other. This amounts to 2,185 Manitobans and 44,375 Canadians with limitations in all the above categories.

## DISABLED ADULTS - NATURE OF DISABILITIES

In Canada, there were 3,039,425 disabled adults (aged 15+) in 1986, and in Manitoba there were 145,955. Each of these adults were asked to specify the nature of their disabilities. The percentages of disabled adults claiming each type of disability are very nearly the same for Manitoba and Canada.

Most disabled adults claimed to have limitations in Mobility and Agility. These two types of disability were reported by 64.5% and 57.9% of Manitoba's disabled adults, and 65.9% and 57.7% of Canada's disabled adults, respectively.

A limitation in Hearing was the next most frequently reported disability type. In Manitoba, 36.4% of disabled adults reported a Hearing disability, as did 32.0% of disabled adults in Canada.

A limitation in Seeing was reported by 18.0% and 18.2% of disabled adults, while a limitation in Speaking was reported by 8.7% and 8.0% of disabled adults, for Manitoba and Canada respectively.

Other limitations, which include learning disabilities and emotional and psychiatric disabilities, were reported by 23.8% of disabled adults in Manitoba and 24.0% of disabled adults in Canada.

## DISABLED CHILDREN - TYPE OF SCHOOL AND CLASSES ATTENDED

In Manitoba, for 1986, 43.9% of disabled children (aged 0-14) attended regular schools and an additional 47.3% attended regular schools that provided some special classes. These regular and combination schools together, were attended by 91.2% of disabled children in Manitoba. Special schools provided education for 5.7% of disabled children in Manitoba.

In Canada, 55.1% of disabled children attended regular schools and 33.2% attended combination schools. These two types of schools provided education for 88.3% of Canada's disabled children. Special schools for the disabled were attended by 6.2% of disabled children in Canada.

Of the disabled children in Manitoba that attended regular or combination schools, 61.6% attended all regular classes, 31.4% attended some regular and some special classes and 7.0% attended special classes only.

Of the disabled children in Canada that attended regular or combination schools, 68.5% attended all regular classes, 24.0% attended some regular and some special classes and 7.5% attended special classes only.

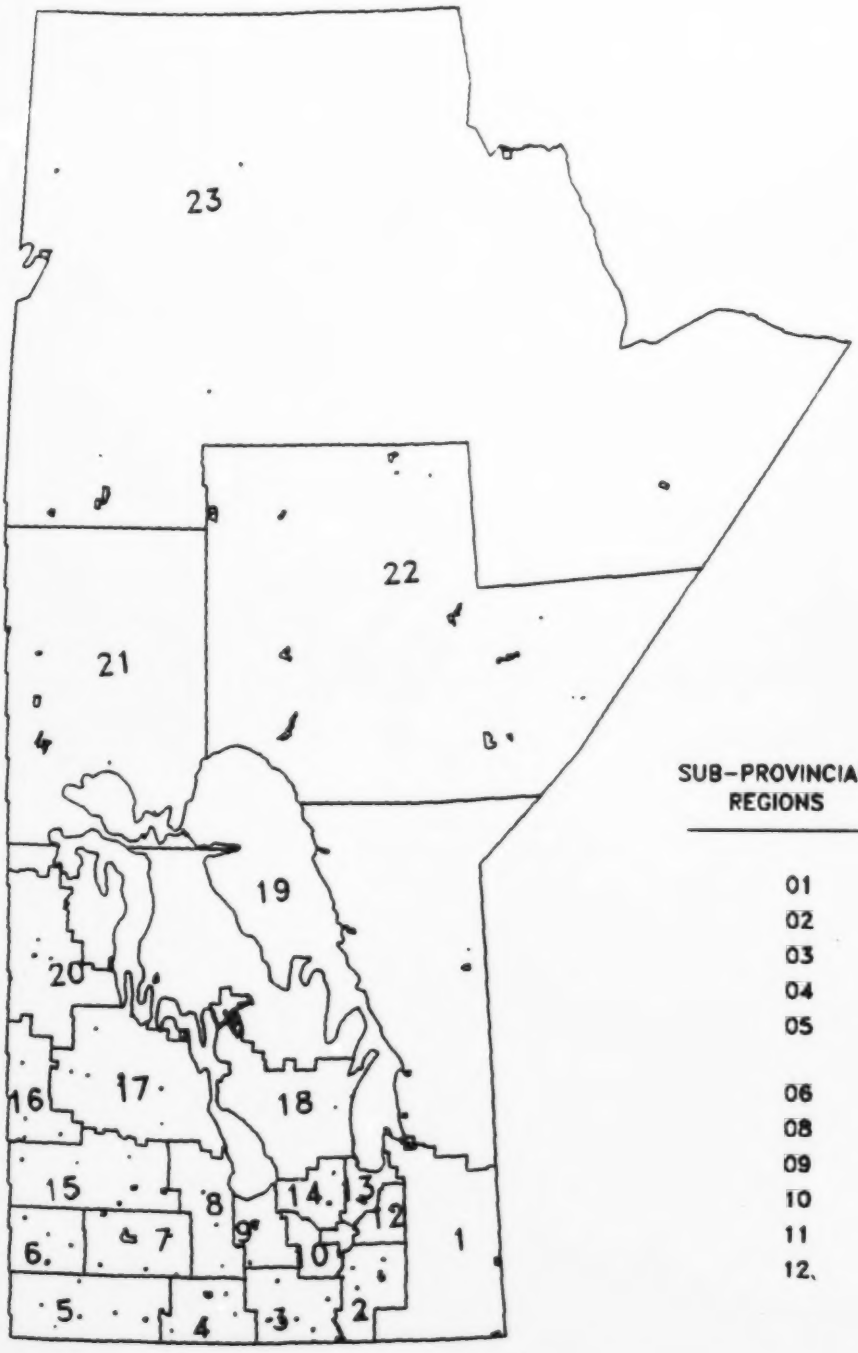
## SECTION II

## SUB-PROVINCIAL REGION DATA

# MANITOBA SUB-PROVINCIAL REGIONS



| SUB-PROVINCIAL REGIONS | CENSUS DIV. (OR CITY) |
|---|---|
| 01 | WINNIPEG |
| 02 | BRANDON |
| 03 | 1, 2, 12 & 13 |
| 04 | 3 & 10 |
| 05 | 4, 5 & 7 EXCL. BRANDON |
| 06 | 8 & 9 |
| 08 | 14 & 18 |
| 09 | 6, 15 & 16 |
| 10 | 17 & 20 |
| 11 | 19 & 21 |
| 12 | 22 & 23 |

## REGIONAL OVERVIEW

The data in this section is derived only from those persons, living in households, who responded positively to the question regarding activity limitations on the 1986 Census, and were then included in HALS.

It was noted by Statistics Canada, that this group tended to be more severely disabled in general than the disabled population discussed in Section I of this report. However, Table 11 shows that 21.3% of disabled seniors included in this section have mild disabilities, as do 41.1% of the disabled population aged 15 to 64.

Data in this section is presnted for 11 regions of Manitoba, including Winnipeg, Brandon and 9 other regions which are aggregations of Manitoba's 23 Census Divisions, as specified on the map provided.

Tables 9 through 15 on the following pages present data on the disabled populations of these 11 sub-provincial regions. Included are:

age/sex distributions
nature and severity of disabilities
labour force activity
highest level of schooling
disability related dependencies
marital and family status
total income
disability related income and expenses
level of activity

From the sample that responded positively to the census question on activity limitations, HALS estimates 83,995 disabled persons living in households in Manitoba, during 1986. Of these, 56.7% are in region 01 (Winnipeg), 4.0% are in region 02 (Brandon), 9.6% are in region 03, 4.3% are in region 04, 4.2% are in region 05, 3.2% are in region 06, 3.7% are in region 08, 4.8% are in region 09, 4.5% are in region 10, 2.7% are in region 11 and 2.3% are in region 12.

Also, of this 83,995 total disabled persons, 4.4% are aged 0-14 years, 13.3% are aged 15-34 years, 8.9% are aged 35-44 years, 9.8% are aged 45-54 years, 20.2% are aged 55-64 years, 22.5% are aged 65-74 years and 20.8% are aged 75 years and over.

Males account for 47.8% of the "More Severely Disabled" population of Manitoba living in households, and females account for 52.2%.

TABLE 9. SUMMARY OF THE DISABLED IN MANITOBA (AGED 15+) BY SUB-PROVINCIAL REGION

| REGION | DISABLED POPULATION AGED 15+ | | NOW MARRIED | FAMILY PERSONS | LIVING ALONE | HAVING DISABILITY RELATED INCOME | HAVING DISABILITY RELATED EXPENSES | SATISFYING ACTIVITY LEVEL | DAILY PRE-SCRIPTION DRUG USE |

DATA SOURCE: STATISTICS CANADA HEALTH AND ACTIVITY LIMITATION SURVEY JULY, 1989

## DATA HIGHLIGHTS

Table 11 displays the nature and severity of disability for those aged 15 to 64 and 65 and over. For the 65 Years & Over age group, 21.3% of disabled persons have Mild disabilities, 39.8% have Moderate disabilities and 38.9% have Severe disabilities. The percentage of disabled seniors with Severe disabilities, within each region, ranges from 18.7% for Region 05 to 42.3% for Region 01.

For the 15 to 64 age group, 41.1% have Mild disabilities, 37.2% have Moderate disabilities and 21.7% have severe disabilities. The percentage of disabled persons aged 15 to 64 with Severe disabilities, within each region, ranges from 11.0% for Region 04 to 24.0% for Region 02.

Limitations in Mobility and Agility account for 83.9% and 72.7% of the disabled senior population of Manitoba, and 67.3% and 56.3% of the disabled aged 15 to 64, respectively. For all 11 regions, and both age groups, these two types of disability are the most prevalent.

The percentage of disabled seniors with limitations in mobility ranges from 78.8% for Region 10 to 87.9% for Region 06. For those aged 15 to 64, the percentage of the disabled with limitations in mobility ranges from 51.9% for Region 04 to 70.1% for Region 05.

Table 13 shows that 14.8% of disabled Manitobans, aged 15 and over, use Visual Aids, 8.3% use Aids For Hearing, 25.8% use Mobility Aids and 1.9% use Aids for Hands/Arms. The percentage of disabled adults, within each region, that use Mobility Aids ranges from 16.2% for Region 04 to 29.2% for Region 01.

Also from Table 13, 63.1% of Manitoba's disabled adults use prescription drugs daily and 68.9% use prescription or non-prescription drugs on a regular basis. The regular use of prescription or non-prescription drugs ranges from 61.7% for Region 12 to 82.9% for Region 05.

Table 14 shows that 19.9% of disabled adults in Manitoba have disability related income, while 45.5% have disability related expenses. The two largest components of disability related expense are Drugs and Transportation, which are bought by 34.0% and 13.6% of Manitoba's disabled adults, respectively.

The percentage of disabled adults, within each region, buying Drugs ranges from 4.2% for Region 12 to 50.9% for Region 08, and buying Transportation (services) ranges from 3.3% for Region 12 to 24.4% for Region 04.

The Median Total Income of Manitoba's disabled is $8,790. Region 10, has the lowest Median Income with $7,020, while Region 01 has the highest with $9,670.
